2.38 Average neutron time-of-flight instrument response function inferred from single D-T neutron events within a plastic scintillator

Monday, 16 April 2018 10:46 (120)

The bulk ion-temperature and neutron reaction history are important characteristics of a fusion plasma. Extracting these from a measured neutron-time-of-flight (nTOF) signal, either by convolution or de-convolution methods, requires accurate knowledge of the instrument response function (IRF). This work describes a novel method for obtaining the IRF directly for single D-T neutron interactions by utilizing n-alpha coincidence. The $t(d, \alpha)n$ nuclear reaction was produced at Sandia National Laboratories' Ion Beam Laboratory using a 300-keV Cockcroft-Walton generator to accelerate a 2- μ A beam of 175-keV D⁺ ions into a stationary ErT2 target. The average neutron IRF was calculated by taking a time-corrected average of individual neutron events within an EJ-228 plastic scintillator. The scintillator was independently coupled to two photo-multiplier tubes operated in current-mode: a Hamamatsu 5928 mod-5 and a Photech PM240. The experimental set-up and experimental results will be discussed. Work supported by DOE NNSA contract DE-NA0003525.

Primary author(s) : STYRON, Jedediah (University of New Mexico, Nuclear Engineering)

Co-author(s) : RUIZ, Carlos (Sandia National Laboratories); HAHN, Kelly (Sandia National Laboratories); COOPER, Gary (University of New Mexico, Nuclear Engineering); CHANDLER, Gordon (Sandia National Laboratories); JONES, Brent (Sandia National Laboratories); MCWATTERS, Bruce (Sandia National Laboratories); VAUGHAN, Jeremy (University of New Mexico, Nuclear Engineering); TORRES, Jose (Sandia National Laboratories); ALBERTO, Perry (Sandia National Laboratories)

Presenter(s) : STYRON, Jedediah (University of New Mexico, Nuclear Engineering); RUIZ, Carlos (Sandia National Laboratories); HAHN, Kelly (Sandia National Laboratories); COOPER, Gary (University of New Mexico, Nuclear Engineering); CHANDLER, Gordon (Sandia National Laboratories); JONES, Brent (Sandia National Laboratories); MCWATTERS, Bruce (Sandia National Laboratories); VAUGHAN, Jeremy (University of New Mexico, Nuclear Engineering); TORRES, Jose (Sandia National Laboratories); ALBERTO, Perry (Sandia National Laboratories)

Session Classification : Session #2, Monday Morning Poster Session
