**Outreach Activities for Plasma Science** M. HAYNES, General Atomics, K. BANNAN, Lawrence Berkeley Laboratory, J. DELOOPER, Princeton Plasmas Physics Laboratory, T. EASTMAN, P. SWEET, University of Maryland, T. SMITH, Massachusetts Institute of Technology — The need for communication beyond experts from sub-fields of scientific inquiry has been long identified. In response to this need, new outreach activities for plasma science have begun to take shape and grow. One example of this increase in activity is the formation of the Coalition for Plasma Science. The focus of the Coalition's efforts is to enhance the understanding and support for plasma science in the scientific community, the education community, business and the general public. One of the Coalition's first activities was to coordinate the assembly of an eight panel exhibit entitled Plasmas: Science and Technology for the 21st Century. The formation of the Coalition and the display will be described and some possible future activities will be outlined.
