

Abstract Submitted  
for the DPP98 Meeting of  
The American Physical Society

Sorting Category: 5.1.1.2 (experimental)

**Comparisons of Measurements and Gyrofluid Simulations of Turbulence in DIII-D**<sup>1</sup>

R.V. BRAVENEC, D.W. ROSS, M.E. AUSTIN, D.M. PATTERSON, W.L. ROWAN, Fusion Research Center, The University of Texas at Austin, G.R. MCKEE, R.J. FONCK, University of Wisconsin, Madison, K.H. BURRELL, J.C. DEBOO, C.M. GREENFIELD, General Atomics, W. DORLAND, University of Maryland, M. KOTSCHENREUTHER, Institute for Fusion Studies, M.A. BEER, G.W. HAMMETT, Princeton Plasma Physics Laboratory. — Initial comparisons<sup>2</sup> have been made between time-averaged measurements of density fluctuations from beam-emission spectroscopy (BES) on DIII-D and nonlinear gyrofluid simulations using the PPPL/IFS gyrofluid code.<sup>3</sup> In this work we extend the previous work to a time-dependent study of discharges with modulated electron-cyclotron heating, where we model the heating modulations in the simulations as perturbations of the local plasma profiles.

<sup>1</sup>Work supported under U.S. DOE Contracts DE-AC03-89ER51114 and DE-AC02-76CH03073, and Grants DE-FG03-97ER54415, DE-FG03-96ER54373, DE-FG03-95ER54296, and DE-FG02-89ER53296.
