

Transitions to Oversized Corrugated Waveguide*

John L. Doane

General Atomics, P.O. Box 85608, San Diego, California 92186-5608

email: doane@gav.gat.com

Data are presented for transitions from small rectangular waveguide designed for: 99.9% mode purity to measure high power 31.75 mm components at 94 and 110 GHz; and 90% efficiency for 63.5 mm waveguide measurements from 50-100 GHz and 100-180 GHz.

*Work supported by General Atomics IR&D funds and commercial contracts.
